

Detailed Analysis & Findings

Basic Analysis

1. Total Number of Orders Placed

The analysis revealed the total number of customer orders placed throughout the recorded period. This metric helps measure overall business activity and customer engagement.

Finding: A total of 21,350 orders were placed.

2. Total Revenue Generated from Pizza Sales

Revenue was calculated by multiplying the quantity sold by the corresponding pizza price for each transaction.

Finding: The pizza business generated approximately \$817,860.05 in total revenue.

3. Highest-Priced Pizza

The menu was analyzed to identify the pizza with the highest selling price.

Finding: The Greek Pizza (XXL) was the most expensive pizza on the menu, priced at \$35.95.

4. Most Common Pizza Size Ordered

Customer ordering patterns were examined to determine the most preferred pizza size.

Finding: Large (L) pizzas were ordered more frequently than any other size, indicating strong customer preference for larger portions.

5. Top 5 Most Ordered Pizza Types

Pizza varieties were ranked based on total quantities sold.

Finding: The top-selling pizzas were dominated by Classic and Chicken varieties, indicating higher customer demand for these flavors.

Business Insight: These pizzas should be prioritized in inventory management and promotional campaigns.

Intermediate Analysis

6. Total Quantity Ordered by Pizza Category

The total quantity sold was calculated for each pizza category.

Finding: The Classic category recorded the highest quantity sold, followed by Supreme, Chicken, and Veggie categories.

Business Insight: Classic pizzas represent the strongest demand segment and should remain a key focus area.

7. Distribution of Orders by Hour of the Day

Order timestamps were analyzed to identify peak business hours.

Finding: Customer orders peaked during lunch hours and evening meal times.

Business Insight: Staffing and kitchen resources can be optimized during these peak periods to improve service efficiency.

8. Category-wise Distribution of Pizzas

The pizza menu was analyzed to determine how pizza types are distributed across categories.

Finding: The Classic category contained the largest number of pizza varieties available on the menu.

Business Insight: A diverse Classic menu contributes to its strong sales performance.

9. Average Number of Pizzas Ordered Per Day

Daily sales were aggregated and averaged to determine average demand.

Finding: Customers ordered approximately 138 pizzas per day on average.

Business Insight: This metric can be used for inventory forecasting and demand planning.

10. Top 3 Pizza Types Based on Revenue

Revenue contribution was calculated for each pizza type.

Finding: 1. Thai Chicken Pizza 2. Barbecue Chicken Pizza 3. California Chicken Pizza

These pizzas generated the highest revenue among all menu items.

Business Insight: Premium chicken-based pizzas contribute significantly to business profitability.

Advanced Analysis

11. Percentage Contribution of Each Pizza Type to Total Revenue

Each pizza type's revenue contribution was compared against total revenue.

Finding: A small group of high-performing pizzas accounted for a significant share of total sales revenue.

Business Insight: Identifying high-contributing products helps focus marketing and promotional strategies.

12. Cumulative Revenue Generated Over Time

A running total of revenue was calculated across the sales period.

Finding: Revenue showed a consistent upward trend throughout the year, indicating stable customer demand and business growth.

Business Insight: The steady increase in cumulative revenue reflects healthy sales performance and customer retention.

13. Top 3 Revenue-Generating Pizza Types Within Each Category

Pizza types were ranked within their respective categories based on revenue generated.

Finding: Each category had a few standout pizzas that significantly outperformed others in terms of revenue.

Business Insight: Focusing promotions on top-performing pizzas within each category can maximize profitability while maintaining product diversity.

Overall Business Conclusion

The analysis demonstrates that the pizza business maintains strong sales performance, generating over \$817K in revenue from more than 21K customer orders. Large-sized pizzas are the most preferred choice among customers, while Chicken and Classic pizzas dominate both sales volume and revenue generation.

The Thai Chicken Pizza emerged as the highest revenue-generating product, highlighting customer willingness to purchase premium menu items. Peak ordering periods occur during lunch and evening hours, providing opportunities for operational optimization.

Overall, the findings suggest that maintaining inventory for high-demand pizzas, promoting top-performing products, and optimizing resources during peak hours can further improve business performance and profitability.
